

NeuroLink Patients... In their own words

Due to the huge demands on one's body, athletes find there is a fine line between peak fitness, and injury or illness. I have found NeuroLink to be the most effective health care modality I have encountered. I have utilized NeuroLink over the past 5 years for a variety of complaints, physical and metabolic - and would not be without it. It has in essence enabled me to compete with some of the best athletes in the world.

K Murphy

NZ Cross Country Champion

2 times NZ steeplechase champion

Captain NZ Mountain Running Team - 2 times World Champion silver medalist.

Our 19 year old daughter, has downs syndrome and a terminal heart problem. NeuroLink has been a life saver for her. NeuroLink has given her a greater quality of life, than she would otherwise have had, if she had relied on traditional medicine. When she was 13 with pneumonia, the hospital told us it would be many weeks before she recovered if at all. After one NeuroLink treatment, she was back at school in less than 2 weeks, fully recovered.

A and B Hamilton, Managing Directors

I have had many positive NeuroLink treatments over a period of years. I had dyslexic tendencies: poor spelling, low self-esteem, speech difficulties, and poor concentration, through out my life, showing signs of further deterioration with age. After only one NeuroLink session, there was amazing clarity and improvement of my symptoms. I went on to study an intensive anatomy and physiology diploma, a major career change at age 45.

B Hilton, Massage Therapist

I had been severely injured after being catapulted from a bus in 1985. This resulted in hearing loss in my left ear, severe incontinence and menorrhagia for a long period. Dr Phillips' NeuroLink system altered the menorrhagia immediately. Incontinence which was a 24 hour problem is now almost non existent. My hearing loss has not fully returned but is changing. All this in one session!

Dr N Tucker, Doctor

I am 69 years old, still delivering corporate coaching, training programs and seminars. I personally have found NeuroLink to be the most effective healing method I have ever experienced - is little short of amazing. In particular I am impressed with the ability of NeuroLink to accurately diagnose the problem. I have usually found, that whatever ails me, doesn't take more than one or two treatments to fix.

I Barrow, Author and Counselor

Over 10 years, NeuroLink has treated me successfully for weight, asthma, back, heart artery problems, as well as viruses, low blood sugar and fatigue. I used to go to a General Practitioner who would always treat symptoms which really only masked my problems, but with the NeuroLink system, my problems were treated from the cause and the symptoms disappeared.

L Henry, Commercial Decorator

I am 41 years of age, and was diagnosed with a large cancerous tumor in my sinus cavity. I was given a frightening prognosis. I was informed that my brain didn't know the tumor was there, and NeuroLink corrected this immediately. At this moment, I am functioning like I did in my twenties with oodles of vitality.

S den Boogert, Company Director

This procedure is not covered through Medicare.

Disclaimer: Though NeuroLink has been reported to be beneficial for a wide range of conditions, this treatment is not meant as a cure for any condition or disease and no therapeutic outcomes can be guaranteed.

"Thank you for taking time to investigate the Neurolink System of Health Care. It represents many years of research, which now offers hope to areas of health previously considered hopeless.

Dr. Allan K. Phillips D.O.
Founder

Neurolink is now taught and practiced by physicians across 4 continents.

What is Neurolink?

Neurolink is a complete system of health care, that utilizes the only 100% accurate diagnostic tool available on the planet - the BRAIN. Your brain (not your mind) governs the function of all your body systems - that is every cell, gland, muscle and tissue in your body. So, it makes sense to go to the "source" with our complaints. The Neurolink system is about finding out what the brain knows about your complaint, and then feed information back, so your brain can make the correction.

Neurolink approaches health care with a neurophysiological context. It is a system of sequential "checks" that evaluate all the possibilities (going on in your body) that may have translated themselves into symptoms of ill health.

What does Neurolink treat?

Your complaint may have already been given a "label": the name given to describe a particular group of symptoms. The list is infinite, but a few examples are: asthma, sciatica, fibromyalgia, migraines, ADD, hepatitis, allergies, irritable bowel, tennis elbow...and the list goes on. All these labels do is DESCRIBE symptoms, they do not ESTABLISH causes.

With that said, Neurolink claims to fix/cure NOTHING per se, for it does not treat "labeled" complaints or symptoms themselves. Instead, similar to servicing your car, Neurolink runs "checks" (and corrections where needed) on all your body systems, to restore them to optimum function. Then, the symptoms of pain/ill health can resolve.

A more accurate approach to diagnosis

Many health care providers must rely on what you tell them about your complaint to make a diagnosis. What if you forget to tell them everything? What if you don't remember all your health care history? What if something is overlooked in your x-ray or lab results?

With Neurolink it does not matter. Your brain knows infinitely what your body requires to be completely well, and Neurolink "taps" into that information.

Brain Phenomena:

- The brain operates the "blueprint that represents your unique, individual "normal".
- Operates at 248 mph, controlling 300,000 enzyme functions per minute.
- Contains 100 billion active neurons, each with some 20,000 connections.
- Interprets information from 260 million light receptors in the eyes.
- The brain can store 280,000,000,000,000,000,000 thought processes in our lifetime.
- Each cell containing DNA represents the smallest "blueprint" of ourselves.

How does Neurolink work?

Neurolink, as the name implies, is the linking of brain pathways, similar to electrical circuits in your home. When the amount of power to a specific circuit exceeds its threshold, a fuse will blow. Whilst power is lost to that particular circuit, the wiring system of your home is still protected.

Similarly, our bodies also have maximum tolerances. The brain will recognize when these thresholds have been exceeded. One principle of neurophysiology is, the brain operates within a set of parameters unique to each of us. When all our body systems function within our individual "template" we will have great health. When your body "breaks down" - physically, pathologically, chemically, or emotionally, you experience symptoms of pain/feeling unwell. This happens because your body has exceeded its individual set of tolerances. Now there is activity outside your template of "normal". The brain is no longer in full control, and problems arise. Power failure in your home, won't be fixed by renewing the fuse! Firstly, you must identify the cause of the overload. In just the same way, Neurolink addresses the root cause.

What makes Neurolink Different?

- Neurolink considers underlying factors that will not show on scans or blood tests, etc, allowing the real cause to be addressed.
- It is the only form of health care available, where the brain recognizes and corrects the complaint. This provides the most accurate approach to diagnosis.
- It is non-manipulative, stress and pain-free.
- The newborn to the very aged, those with intellectual/physical disabilities and animals can benefit.

The Neurolink patient experience

Neurolink includes gentle contact with anatomical points that represent neurological circuits. The goal of Neurolink consultation is to determine if the brain is controlling all body systems at their full potential. Each body system is assessed using specific protocols or "checks". A muscle-test, is used as a "feedback" indicator to highlight any body system that is not functioning to its potential. This involves a muscle being held strong against a certain resistance. This muscle-test is the practitioner's way of receiving information from the brain. At any step where a circuit is broken, the brain will become confused, and the muscle will lose strength. A Neurolink practitioner is essentially a facilitator feeding information back to the brain about the dysfunction. Once the brain recognizes the dysfunction, it starts to correct it immediately.

Care with Neurolink is tailor-made for you. Corrections can only be made in those areas your brain indicates need correcting...and your brain doesn't lie. Nothing can be forced upon you to make your condition worse. This makes Neurolink the safest health care option available. Utilizing the brain to diagnose and correct your complaint will expose you to its profound ability to restore your body to its potential. Only your brain holds the key to your optimum health.

"Therefore... *your* brain is the most qualified medical

specialist *you* will ever have."
